

Configuration management tool

← Ansible
↙

Tool by which we can automate the Installation of packages, creation of files/directory etc in any number of nodes.

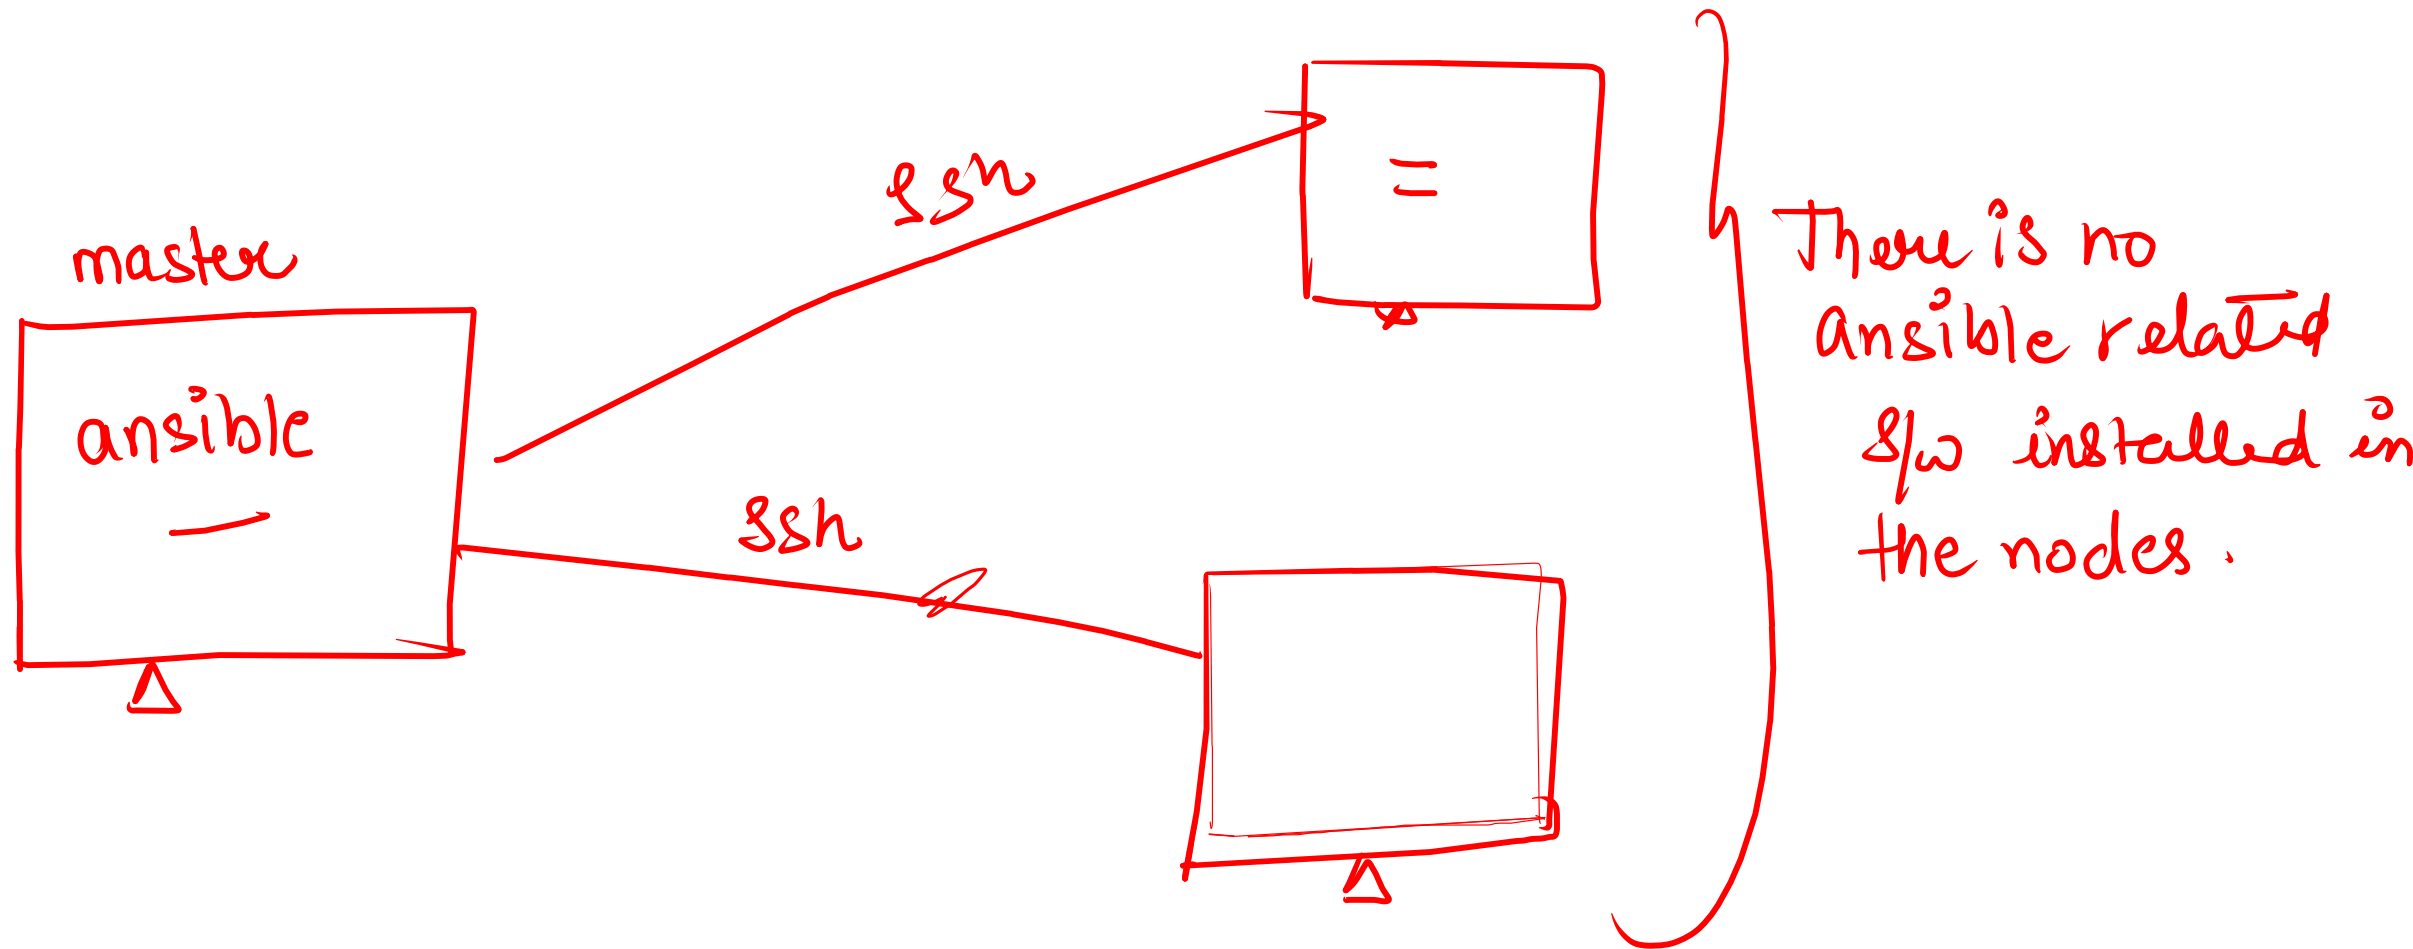

Ansible ÷ It is an open source automation tool used for

- ✓ ① Configuration management
- ✓ ② Application deployment
- ✓ ③ Task automation
- ✓ ④ IT orchestration.

⇒ To perform these task we write ansible playbook which is written in yaml format. <<

>> Agentless → Doesn't require any software installed on the remote machine

→ Ansible → Modules → script which uses ansible libraries to perform the tasks in the nodes.
